Question **1**

Correct

Mark 1.00 out of 1.00

Given an array arr = {45,77,89,90,94,99,100} and key = 99; what are the mid values(corresponding array elements) in the first and second levels of recursion?

a. 90 and 99 ✓

b. 90 and 94

c. 89 and 99

d. 89 and 94

Question **2**

Correct

Mark 1.00 out of 1.00

_____ search takes a sorted/ordered list and divides it in the middle.

a. Both (1) & (3)

b. Binary ✓

c. Linear

d. Hash

Question **3**

Correct

Mark 1.00 out of 1.00

Which method of searching involves sequentially comparing each element until a match is found?

a. Hashing

b. Binary search

c. Linear search ✓

d. Jump search

Question **4**

Correct

Mark 1.00 out of 1.00

In _____ checks the elements of a list, one at a time, without skipping any element.

a. Hash search

b. Linear search ✓

c. Binary search

d. Both (1) & (3)

Question **5**

Correct

Mark 1.00 out of 1.00

Which of the following statements about linear search is true?

a. Linear search can be applied to both sorted and unsorted lists. ✓

b. Linear search requires the list to be sorted.

c. Linear search divides the list into halves.

d. Linear search is more efficient than binary search on large lists.

Question **6**

Correct

Mark 1.00 out of 1.00

In which type of search is the list divided into smaller sublists during the search process?

a. Sequential search

b. Linear search

c. Hash search

d. Binary search ✓

Question **7**

Incorrect

Mark 0.00 out of 1.00

What happens in a binary search if the list has an even number of elements?

a. The lower middle element is chosen as the middle element ✗

b. The search stops

c. The higher middle element is chosen as the middle element

d. The middle element is chosen randomly

Question **8**

Incorrect

Mark 0.00 out of 1.00

What type of search would be most appropriate for finding an element in a list that is frequently updated?

- a. Hash search ✗
- b. Binary search
- c. Linear search
- d. Interpolation search

Question **9**

Correct

Mark 1.00 out of 1.00

Which of the following best describes the process of a linear search?

- a. Dividing the list in half repeatedly
- b. Checking each element sequentially ✓
- c. Sorting the list before searching
- d. Skipping every second element

Question **10**

Correct

Mark 1.00 out of 1.00

What is the advantage of binary search over linear search?

- a. Binary search does not require dividing the list
- b. Binary search has a lower time complexity on large, sorted lists ✓
- c. Binary search can find multiple instances of the target element
- d. Binary search works on unsorted lists

Question **11**

Correct

Mark 1.00 out of 1.00

What happens when the element is found in linear search?

- a. The search stops immediately ✓
- b. The search backtracks to find duplicate elements
- c. The search starts over from the beginning
- d. The search continues until the end of the list

Question **12**

Correct

Mark 1.00 out of 1.00

In which situation is linear search more efficient than binary search?

a. When the list is large and sorted
b. When the list is large and unsorted
c. When the list is small and sorted
d. When the list is small and unsorted ✓

Question **13**

Correct

Mark 1.00 out of 1.00

In binary search, how is the middle element determined?

a. By comparing each element sequentially
b. By dividing the list length by two ✓
c. By using a hash function
d. By starting from the first element

Question **14**

Correct

Mark 1.00 out of 1.00

What is the key characteristic of binary search?

a. It can be applied only if the list is sorted ✓
b. It works on unsorted lists
c. It always starts from the beginning of the list
d. It compares elements sequentially

Question **15**

Correct

Mark 1.00 out of 1.00

What is the first step in binary search?

a. Compare the target element with the first element in the list
b. Divide the list into two equal parts
c. Sort the list
d. Compare the target element with the middle element in the list ✓
